

# GROW YOUR TELEHEALTH BUSINESS BY SERVING SKILLED NURSING FACILITY RESIDENTS DURING COVID-19 AND BEYOND

**Connect SNFs With Providers**

**Nationwide Provider Pool**

**Military Grade Security**

The need for a HIPAA-compliant, video capable, easy to use electronic system to connect patients to healthcare providers has never been greater. Residents living in healthcare facilities are confined to the building or even to their rooms. Physicians and other providers are not visiting facilities, except in emergencies. SAGE Health was designed to connect high-quality providers with the skilled nursing residents who need care, improving outcomes for all users of this secure system.

## What is SAGE SECURE?

Sage Health is a simple and secure data transmission solution. Healthcare facilities are using SAGE to safely send and receive PHI documents to and from the physician or practice. Physicians are then able to view records from the facility's EMR sent via SAGE Health and send their notes and instructions back to the facility. Using a video meeting software, such as Zoom, the provider and resident are able to see and speak to each other in real time. A facility nurse should be available to take current vitals or help with any other questions. Documents are stored securely in a cloud account and can be accessed and organized by any pre-authorized user.

## How do you use SAGE SECURE?

The requirements are simple. Sign up for a SAGE account to begin receiving appointment requests from Pennsylvania Skilled Nursing Facilities. Determine which appointment types and diagnoses can be treated appropriately via telehealth and access bulk information securely to create charts and receive billing information for multiple patients at once. All you need is an internet browser and a free SAGE account. Providers pay a flat fee for each appointment in order to pay for the use of the platform and to reimburse the SNF for their staff's efforts in assisting with the event.
